 Birchalls Ltd.
 Dow McIntosh & Kelly. BAR031.

The only home computer that comes with its own school library.

The Sinclair Spectrum is just \$249 for the 16K model, \$359 for 48K. Microdrives (mass information storage units) \$149. Interface 1 (an expansion device which allows Spectrum to drive microdrives, communicate with other computers, send data by telephone, network, etc.) \$149. Interface 2 (lets you use the ROM cartridge, a revolutionary new software form) \$79. Printers \$169. The Spectrum takes any standard joystick. All prices recommended retail.

If your kids get to learn about computers now, it can be a definite advantage when they leave school.

However, few computers provide any real help with a more immediate problem: getting your kids through school.

The sad fact of the matter is unless you spend thousands of dollars, you end up with little more than a tricked up computer games machine.

And your kids end up skipping their homework again.

One exception is the Sinclair Spectrum. It's the only home computer with a whole library of educational software.

So instead of competing with your kid's homework, it actually complements it.

The Sinclair Spectrum also happens to be the perfect computer to teach your kids about computers.

Because it starts out as a simple and inexpensive keyboard.

And grows, piece by piece, into the sophisticated computer system you see here.

So don't buy your kids a computer that ignores their education.

Give them the one that teaches them about computers while it helps them through school.

The Sinclair Spectrum.

The Sinclair Spectrum.

The Sinclair Spectrum and the vast array of educational software that goes with it are brought to Australia by Barson Computers Pty Ltd, Australia's leading independent computer company.
